Signal Flow

Loaded sample will be sliced with slice editor.
And those slices will be triggered by the step sequencer.

You can slicer sample file here

Step sequencer for triggering sliced samples

You can change fx order with these buttons

Groove Editor

You can make own swing/shuffle behaviour with this.

You can control timing shift of each step with those knobs.

Also you can import groove template midi file.

Quick Start

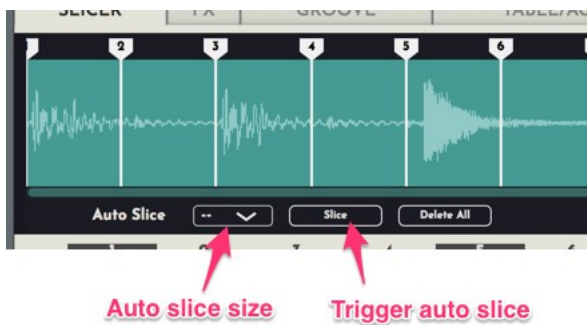

1, Click “Browser” button

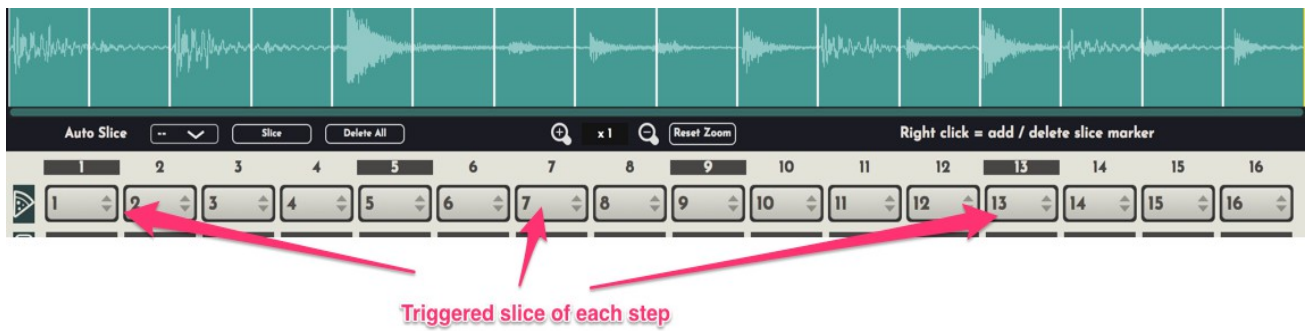

2, Then file browser will show up → select an audio file

3, Sets auto slice size 16, and click “Slice” button → loaded sample will be sliced in 16

4, Assign sliced sample to step sequencer for trigger control

5, You can also control step slice assign in the step slice arranger (full version only)
